SONDAGGIO

Problem

Why does DMARC exist in the first place?

The Email Problem

There is a fundamental security flaw in the way email was designed. 91% of cybercrimes initiated with email.

91%

Impersonation

Attackers can send email from your domain defrauding, staff, customers & suppliers

Delivery

Legitimate email often lands in Spam and false positives cause business disruption

Interception

An Email can be intercepted and changed without the recipient knowing

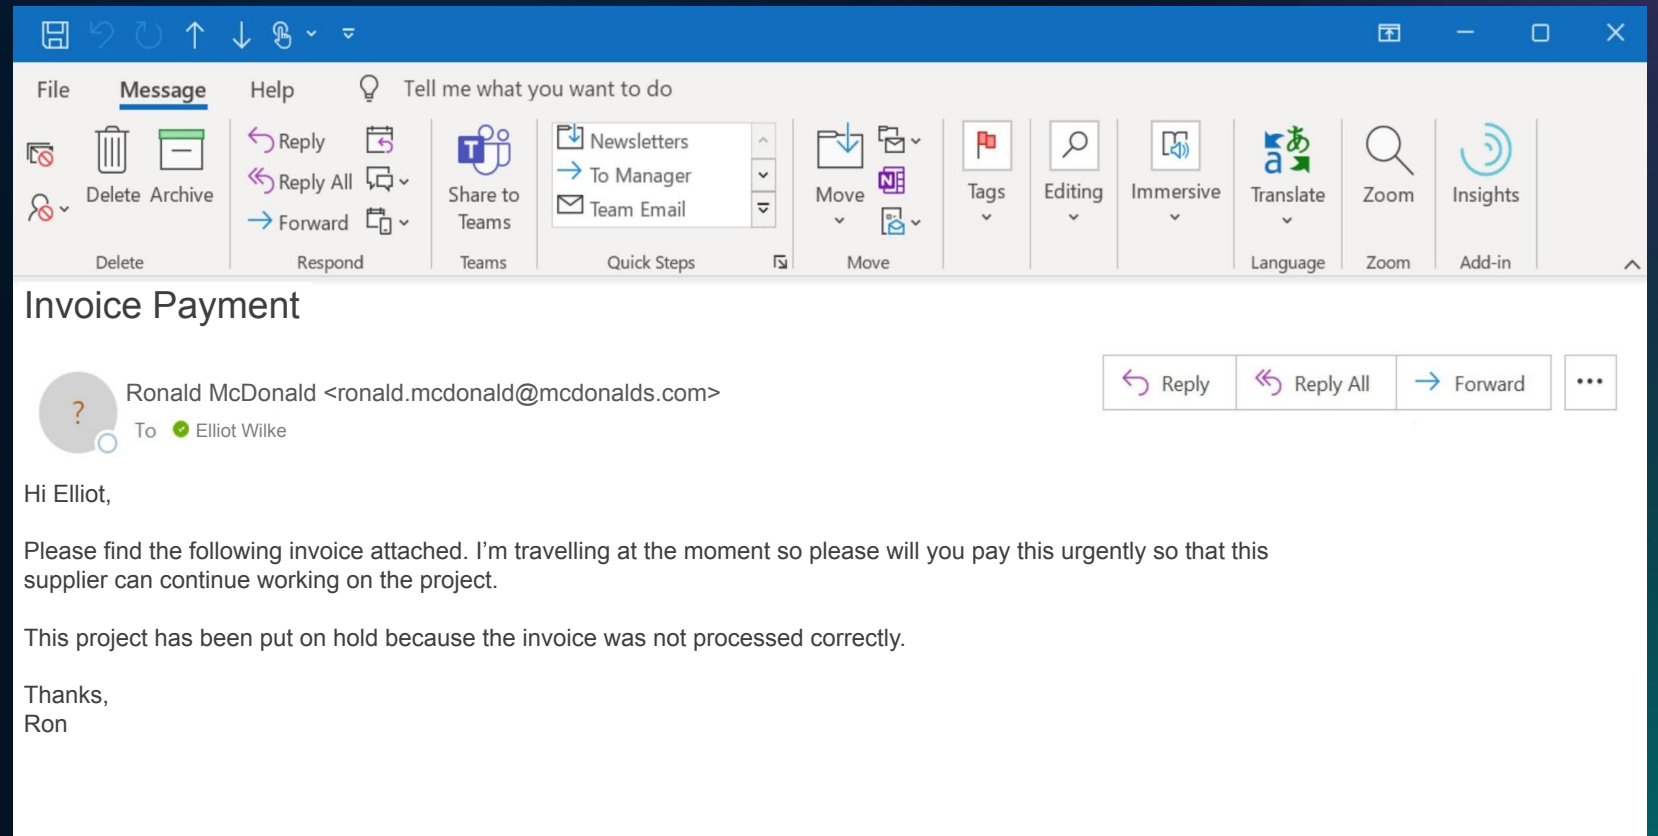

Visibility & Audit

Companies have no active visibility on which providers are sending email from their domain

Impersonation Example

Simulation of what an impersonation email looks like when sent by a cyber-criminal using your domain.

The Damage

Deposit Fraud

Incorrect bank details are falsely associated with a transaction and attackers redirect the money

Ransomware Distribution

Users & staff are lured into installing ransomware from a legitimate looking email

Identity Theft

Users are tricked into leaking their identity to an attacker

Reputation Damage

Fraud on a company's behalf causes immense brand damage & financial losses

Existing Protection

Your staff might be protected by your existing anti-spam provider or perimeter protection but your customers, suppliers and the rest of the world are not.

Sendmarc

The World

The Solution: DMARC

The global security standard for email

Impersonation

Forces a whitelist of IP addresses that are authorized to send emails from your domain (SPF)

Interception

Every email carries a cryptographic signature to ensure anti-tampering (DKIM)

Delivery

Legitimate email is delivered successfully more often because servers can tell that you're a trusted sender

Visibility / Audit

Domain owners can now get a consolidated, global visibility of every sender- both good and bad, then take action

Technology

DMARC

Domain-Based Message Authentication, Reporting and Conformance

An encompassing policy that provides data analytics and enforcement across SPF and DKIM.

DKIM

DomainKeys Identified Mail

A cryptographic signature that verifies the authenticity and integrity of an email, preventing interception during transit.

SPF

Sender Policy Framework

A list of certified servers that are authorized to send email from your domain.

DMARC Configuration

3 policy levels.

1

P=none

No action is taken, messages remain unexamined.

2

P=quarantine

This policy moves suspicious emails to the Junk folder for review.

3

P=reject

DMARC rejects emails that fail authentication and don't come from your infrastructure.

Journey to Protection with DMARC

Phase 1

Analysis

Configure DNS

1

Enable reporting

2

Analyze data

3

Phase 2

Implementation

Project plan

4

Certify senders

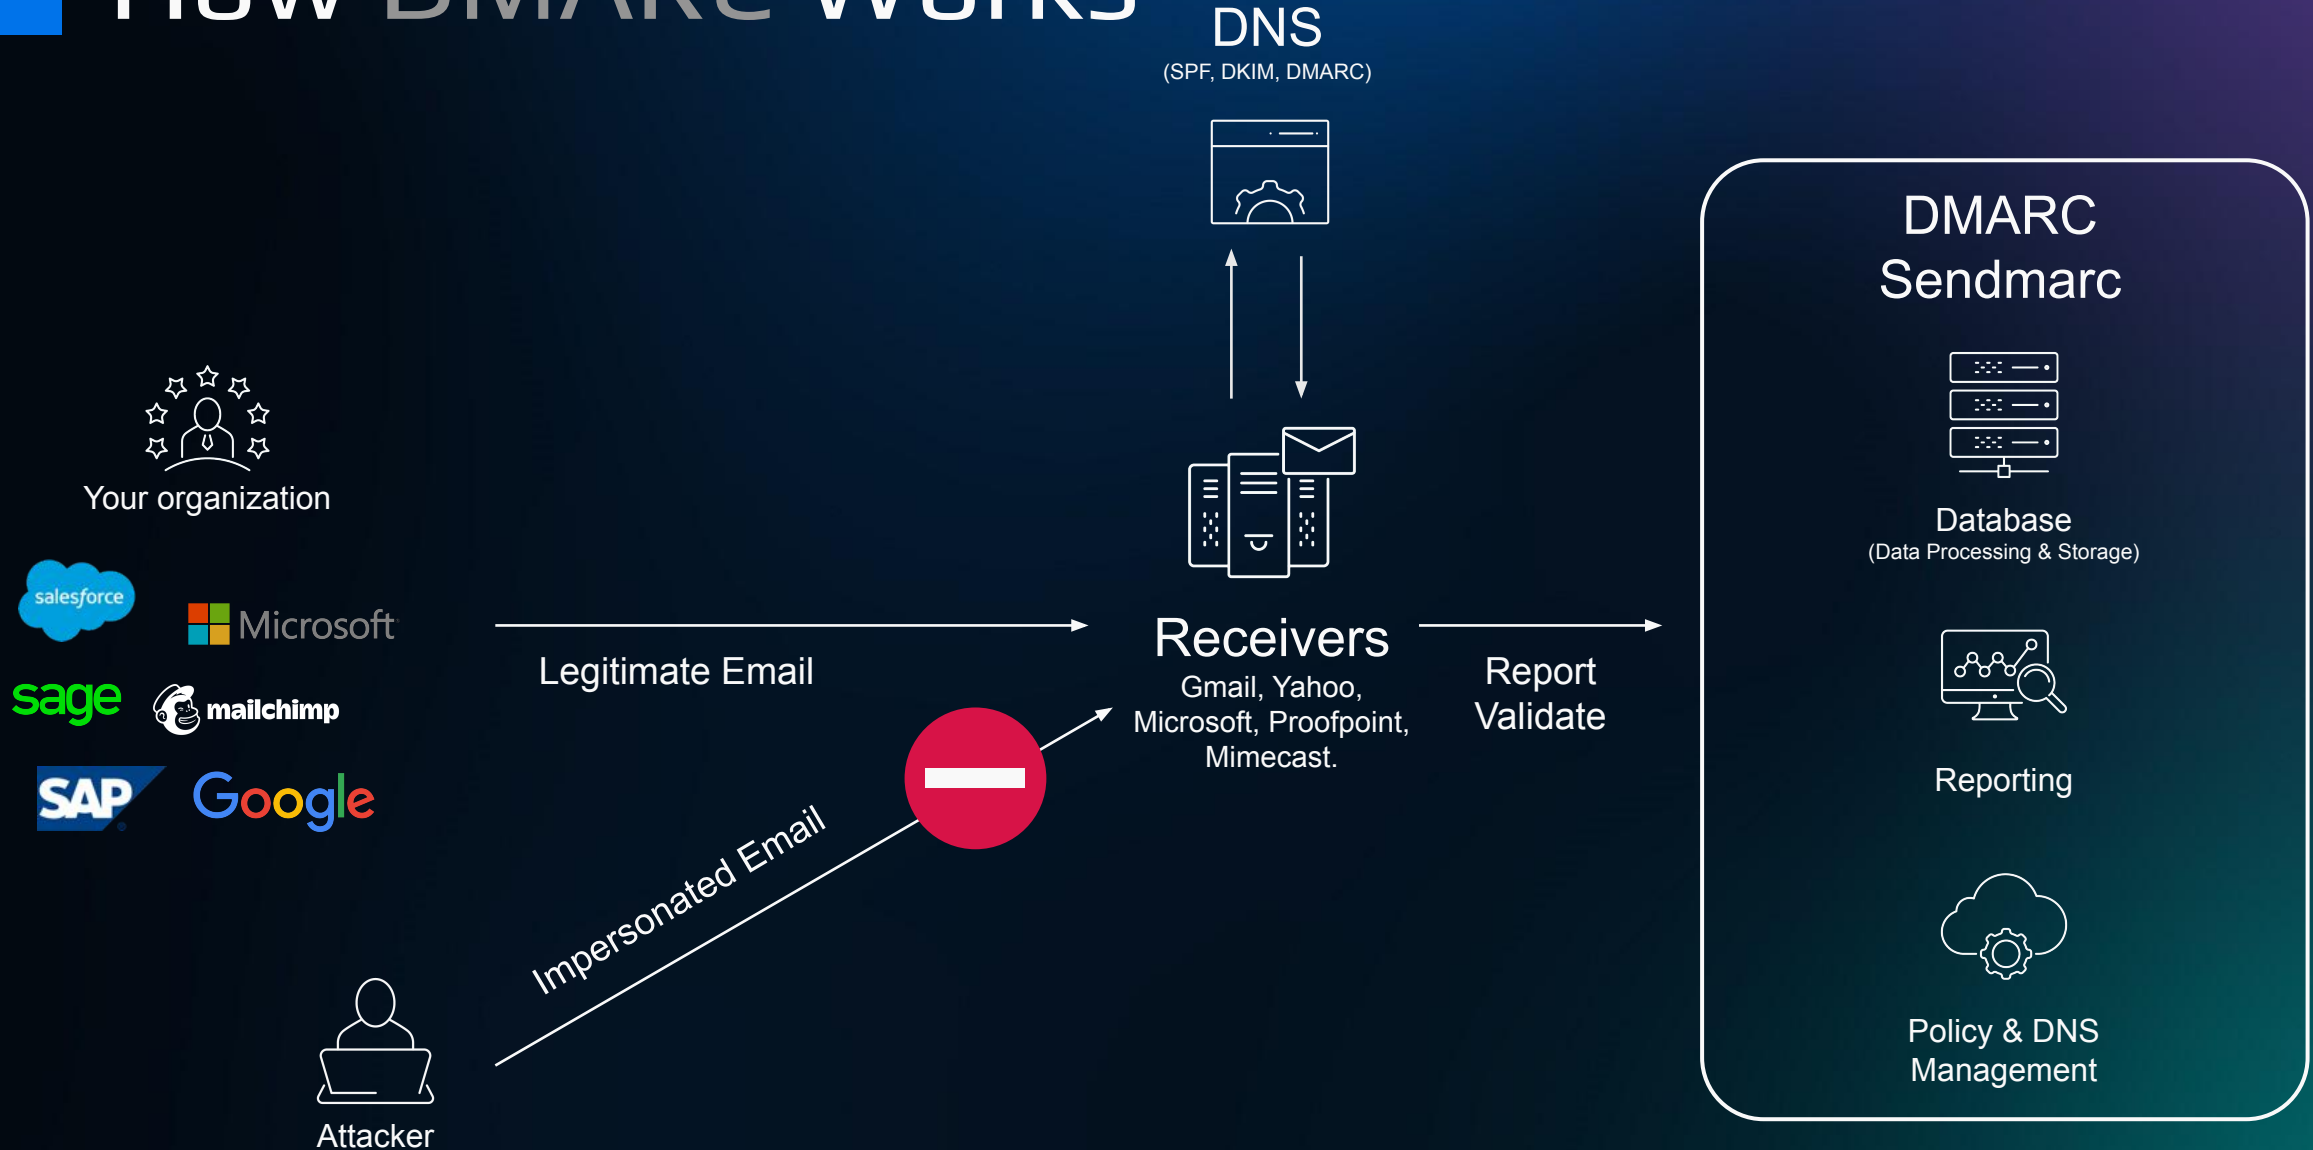

5

Enable protection

6

How DMARC Works

DMARC

DMARC

Google Best Practice
Recommendation

Get help from a 3rd-party service (recommended)

Reports can be difficult to read and interpret in raw format. We recommend using a third-party service that specializes in DMARC to receive, store, and analyze your reports:

- Depending on your mail volume, it's possible to get many reports each day, up to hundreds. Several factors determine the number of reports you get, including: how many servers you send to, how much mail you send, and the reporting options specified in your DMARC policy record.
- Without a third-party service, you might need to create a dedicated Group or mailbox to receive and store the reports.
- Third-party services can combine individual reports.
- Third-party services can analyze aggregated reports, and provide feedback to you about how effective your DMARC record is.

SELLING POINTS

PERCHE' SENDMARC !?

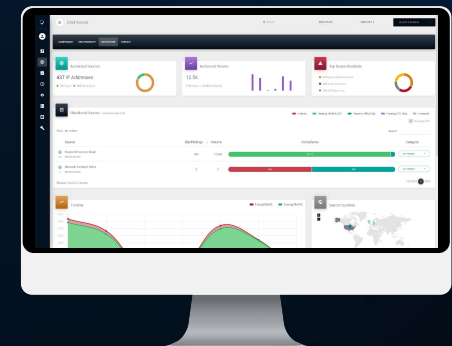

Il modo in cui Sendmarc presenta i dati DMARC è nettamente superiore rispetto alla concorrenza, fornendo informazioni critiche ma al tempo stesso dettagliate per garantire che i domini dei tuoi clienti possano arrivare a $p=reject$.

Inoltre, l'offerta semplice e chiara di servizio (anche gestito) consente di delegare la responsabilità di rendere completamente protetti i domini dei clienti, permettendo al tuo team di concentrarsi sul proprio lavoro senza essere distratto dall'ennesimo fornitore...

PERCHE' SENDMARC !?

...Il punto di forza principale di Sendmarc, tuttavia, è il supporto alle attività di vendita e marketing. Grazie all'accesso al "Partner Portal", è possibile individuare facilmente le opportunità, comprendere quale debba essere il messaggio di vendita e sfruttare strumenti commerciali fondamentali come lo storico DMARC del dominio, i fornitori DMARC già in uso e lo strumento di impersonificazione, che consente di dimostrare in tempo reale la necessità del DMARC impersonando il dominio reale del cliente.

Microsoft, Google & Yahoo

Announce stricter requirements for senders from April 2025

Recent Changes

2024 was DMARC's biggest year.
2025 is shaping up to be just as big, with pressures from multiple directions.

Microsoft Joins DMARC Brigade

Microsoft recently announced that anyone who sends 5k emails per day needs to have DMARC.

Third Party Contracts

Increase in demand for DMARC set to p=reject to be an approved supplier.

NIS2 and DORA

DMARC not specifically mentioned but can be used for compliance.

Cyber Insurance

Increase in cyber insurance questionnaires mentioning DMARC.

The Future of DMARC

Kieran Frost
COO | Sendmarc

Prediction #1

Cybercriminals will begin targeting businesses sending under 5 000 emails per day

Prediction #2

Google, Yahoo, and Microsoft will lower the threshold to increase protection

The Future of DMARC

Domande frequenti sulle linee guida per i mittenti delle email

⚠ Importante: a partire da febbraio 2024, Gmail richiederà ai mittenti che inviano 5000 o più messaggi al giorno agli account Gmail di autenticare le email in uscita, di evitare di inviare email indesiderate o non richieste e di semplificare l'annullamento dell'iscrizione da parte dei destinatari. Scopri di più sui requisiti per l'invio di 5000 o più email al giorno.

⚠ A partire da novembre 2025, Gmail intensificherà l'applicazione delle norme sul traffico non conforme. I messaggi che non soddisfano i requisiti per i mittenti email subiranno interruzioni, inclusi rifiuti temporanei e permanenti.
