

YSOFT SAFEQ 6

Winter 2021 Release (Build 52)

Release Notes

CONTENT

1	Fixes and Improvements	2
1.1	Installation, Administration and Reporting	2
1.2	Terminals	2
1.3	Documentation	2
1.4	Product extensions (formerly known as customizations)	3

1 FIXES AND IMPROVEMENTS

1.1 INSTALLATION, ADMINISTRATION AND REPORTING

New configuration property, `maximalDelayOfPrintingJobs`, is introduced. The spooler cleaning procedure regularly deletes all jobs in pending and printing status that have passed the defined threshold. The default value is 24 hours. (SBT-1926)

The Workflow Processing System has a more robust start procedure. It is improved to start with locally overwritten configuration parameters. (SBT-2126)

The basic parameters of manually created users are not updated on an edit operation with an external MS SQL database. (SBT-2139)

Payment System Administration provides a more descriptive error message if an entitlement already exists in the system. (SBT-2074)

Improvements in localization texts for a server installer, embedded terminals and the terminal access report. (SBT-62, SBT-2085)

1.2 TERMINALS

Embedded Terminal for Ricoh SOP uses left ellipsis for long usernames. (SBT-1547)

Embedded Terminal for Ricoh SOP fully uninstalls servlets. (SBT-2106)

Embedded Terminal for Ricoh SOP installation has SP mode setting as an optional step. It makes the installation/uninstallation procedure more robust. (SBT-2122)

1.3 DOCUMENTATION

The documentation article, "Konica Minolta - Disable the Certificate Verification Settings option", for embedded terminals was updated with a detailed explanation and troubleshooting steps. (SBT-773)

The documentation article, "Editing a Connector" was extended with limitations associated with usage of a service account. (SBT-2105)

1.4 PRODUCT EXTENSIONS (FORMERLY KNOWN AS CUSTOMIZATIONS)

Customers who use YSoft SafeQ extensions should contact their Y Soft RSM or Customer Support Services for compatibility verification with the new Build. We recommend testing all extensions before applying a Build update into a production environment.
