YSoft SafeQ 5 - Release notes

December 16, 2019

## 1 MAINTENANCE UPDATE 75 (12/16/2019)

Warnings:

Due to a Java platform change, a direct update from YSoft SafeQ 5 MU48 and lower, to YSoft SafeQ 5 MU70 and higher, is NOT supported. Installations with YSoft SafeQ 5 MU48 and lower should be updated to YSoft SafeQ 5 MU69 first. Then an update to MU75 can proceed.

Also, due to the Java platform change, a YSoft SafeQ Client's communication with YSoft SafeQ 5 MU75 server and higher, which was updated from a previous YSoft SafeQ 5 version, is affected when a special configuration is used: the encryption is not enabled and the user identification "Login dialog" or "Login dialog – username only" is selected.

To correct the communication, the encryption must be enabled at the Client. There are two options:

- An administrator, or a user with administrator rights, can check the "Use encryption" box in the YSoft SafeQ Client`s port options. (Windows Control panel -> Hardware and Sound Devices and Printers, select a print driver and click Print server properties. Go to Ports tab, select the SafeQ port and click Configure port.)
- The YSoft SafeQ Client can be reinstalled with the "Encryption =1" property in the SafeQ.ini file located in the client's installation folder.
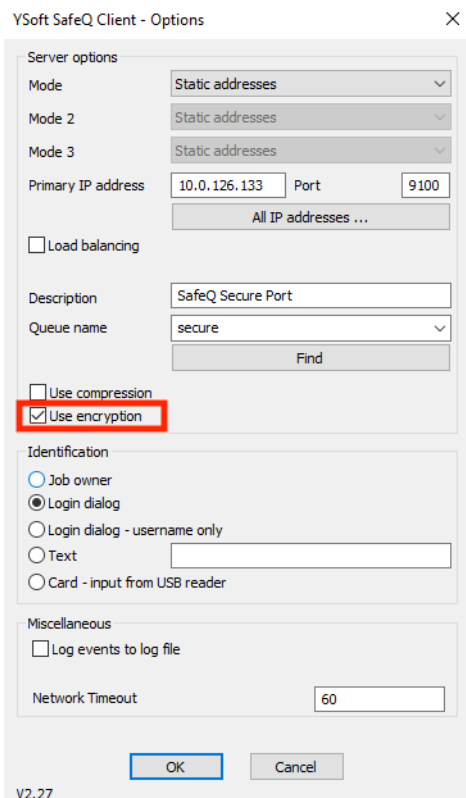

Fixes:

- The "Settings" menu on HP devices is no longer accessible to users authenticated with Embedded Terminal for HP. (SBT-785)
- A user's credit import via the Credit Charger Tool in YSoft Payment System no longer fails when the username contains the dot character. (SBT-765)
- A large scanned file was sometimes improperly processed by the YSoft SafeQ Workflow Processing System. The processing mistakenly started before the file was completely received. It has been fixed. (SBT-746)
