

YSOFT SAFEQ 6

Build 50 Release Notes

CONTENT

1	New Features	2
1.1	YSoft SAFEQ Client v3: Emergency print	2
1.2	YSoft SAFEQ Client v3: Authentication option - STORED_USERNAME	3
1.3	YSoft SAFEQ Client v3: Print job notifications on embedded terminal	3
2	Fixes and Improvements	4
2.1	Client Application and Terminals	4
2.2	Installation and Administration	4
2.3	Product extensions (formerly known as customizations)	5

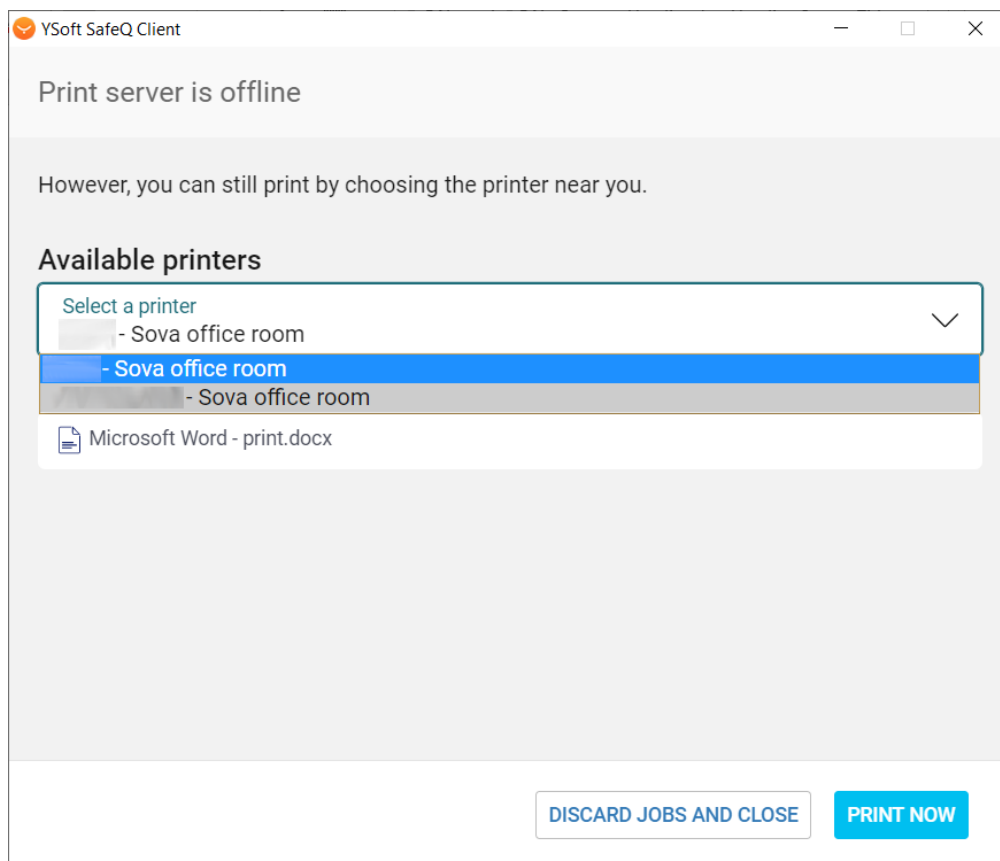

1 NEW FEATURES

1.1 YSOFT SAFEQ CLIENT V3: EMERGENCY PRINT

Emergency print (formerly Offline print) is a client application feature that provides limited printing functionality while a Site Server is not accessible. The client detects a server is inaccessible when no response has been received for a specified time and indicates such status with icon.

During emergency print, a user can print directly to printers without the job passing to a server. Jobs are printed immediately on the selected printer. You can read more in the "[Emergency Print](#)" article.

(SQC-2177)

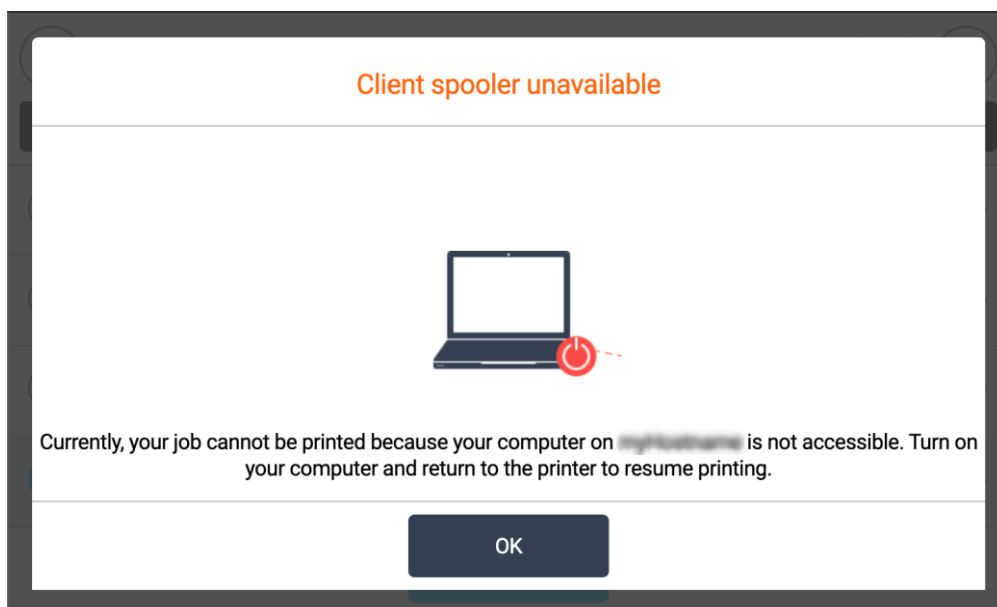

1.2 YSOFT SAFEQ CLIENT V3: AUTHENTICATION OPTION - STORED_USERNAME

A username is retrieved from the configuration file stored locally on a workstation with the client application. The method must be enabled on the Site Server in which the client application is connected otherwise all authentication attempts will fail.

If authentication is successful, the user will not see a login window. If authentication fails, the user will be prompted for login credentials with the standard Username/password dialogue. (SQC-2147)

1.3 YSOFT SAFEQ CLIENT V3: PRINT JOB NOTIFICATIONS ON EMBEDDED TERMINAL WHEN CBPR JOB IS NOT AVAILABLE

When using Client Based Print Roaming, if a user powers off the workstation while the print job is still spooling, the print job cannot be released at the printer. Now, a user screen explains why the job is not released and provides instruction. (SQC-2633)

YSoft SAFEQ Client v3 is under the Early Access Program (YSQL6-049-0000; YSoft SAFEQ Client v3; F_NEW_SQ6_CLIENT), see details about the program in [Early Access Program](#).

The client application use needs to be validated by a Y Soft Solution Consultant.

2 FIXES AND IMPROVEMENTS

2.1 CLIENT APPLICATION AND TERMINALS

Toshiba login screen no longer freezes during JavaScript loading. (SBT-1886)

Pressing <Enter> on a software keyboard sends login for Username/password authentication method on Konica Minolta models with Chrome-based browsers. (SBT-1127)

The Mobile Terminal application for Android was updated. The release fixes problems with QR code reading and secure communication with TLS cypher suites. (SBT-1552)

2.2 INSTALLATION AND ADMINISTRATION

Only the system administrator can use the management interface dashboard widget for user import. (SBT-1727)

System configuration properties, workflowStorageRoot and localWorkflowStorageRoot, now refer to the Site Server locations, which are created with the installation. (SBT-1854)

Imported definitions of scan workflows no longer fail with the null value of the PdfEncryptionLevel parameter. (SBT-859)

JavaScript libraries on web interfaces were updated on the latest versions. (SBT-1690)

Tomcat for management interface updated to the latest version. CVE-2020-11996 is mitigated. (SBT-1525)

The installer now merges the old and new application settings for Workflow Processing System in `WpsService.exe.config` file. (SBT-401)

Spool job cleaner on Site Server is now more efficient under high load conditions. (SBT-1377)

QR code preview for Mobile Terminal can be displayed after changing the size on the management interface. (SBT-1011)

YSoft SAFEQ Client Components (FlexiSpooler client) with authentication option STORED_USERNAME can show notifications from Rule-Based Engine. (SBT-1011)

YSoft SAFEQ Demo for business presentation has new documentation, see "[YSoft SafeQ Demo](#)" chapter. (SBT-1834)

2.3 PRODUCT EXTENSIONS (FORMERLY KNOWN AS CUSTOMIZATIONS)

Customers who use YSoft SAFEQ extensions should contact their Y Soft RSM or Customer Support Services for compatibility verification with the new Build. We recommend testing all extensions before applying a Build update into a production environment.
