1.2	Terminals	2
1.3	Reporting	2
1.4	Product extensions (formerly known as customizations)	3

1 FIXES AND IMPROVEMENTS

1.1 INSTALLATION AND ADMINISTRATION

When upgrading from YSoft SafeQ 5, the old payment system service now stops and changes to a manual start so that the database restore can run without issues. (SBT-1105)

During an upgrade from YSoft SafeQ 5, configuration options for a distributed layer are changed to new YSoft SafeQ 6 defaults. If a customer edited *distributedLayerStartCommand*, *distributedLayerStopCommand* parameters, then values are kept intact. (SBT-374)

Upgrade from YSoft SafeQ 5 no longer duplicates "Default" device group. (SBT-116)

Password protection for an external payment provider has been improved. (SBT-282)

Security of the management interface was improved against Stored Cross-site Scripting (XSS) on the dashboard, the Support Information Page and other areas. (SBT-189)

1.2 TERMINALS

All terminals will no longer allow free of charge operations if a payment system is used and the payment system did not fully start. (SBT-1107)

Embedded Terminal for Xerox does not redirect to an authentication screen during logout from the print/scan application. (SBT-1213)

Payment Machines now refuse money recharging for users with "Unlimited access", "No access" and "Page quota" account types. (SBT-1012)

1.3 REPORTING

Web Reports showing purged printing under "Unprinted jobs (cost savings)" device instead of "unknown device" so the administrator can clearly understand that it was not released. (SBT-1084)

Predefined Web Reports contained purged (not released) counters even though, in some report types, it was not aligned with the report's purpose. (SBT-1026)

1.4 PRODUCT EXTENSIONS (FORMERLY KNOWN AS CUSTOMIZATIONS)

Customers who use YSoft SafeQ extensions should contact their Y Soft RSM or Customer Support Services for compatibility verification with the new Build. We recommend testing all extensions before applying a Build update into a production environment.

You can find additional information on Partner Portal:

<https://portal.ysoft.com/products/ysoft-safeq/extensions-store>

SWC-2 Credentials generator (PIN generator for guest mobile printing) will ignore LDAP users during the password creation process. (GSS-2852)
